

Profit Lock™

v2.3.0 · NinjaTrader 8 · July 2026

WHAT IS PROFIT LOCK?

Profit Lock adds a dedicated panel to your NinjaTrader 8 Chart Trader. Once your trade moves into profit, one click places an OCO bracket (stop + target) at market price — locking in your gains with zero exposure window. In Auto-Lock mode it fires automatically, tick-by-tick, the moment your unrealized profit reaches your configured threshold. Designed to work alongside BreakEven Trail or independently.

WHAT'S NEW IN v2.3.0

Auto-Lock — Tick-by-Tick	Auto Lock reacts on every price tick using NinjaTrader's native <i>OnMarketData()</i> . Latency under 1ms — no polling, no timers, no delays.
Auto-Reset on External Cancellation	v2.3.0 detects when PL_SL or PL_TP are cancelled externally (ATM, manual close, another indicator) and resets automatically — ready for the next trade.
Full Harmony with BreakEven Trail v1.4.0	BET handles break-even trailing. PL handles profit locking. Both coordinate stop management with zero conflicts. The perfect combination.

SYSTEM REQUIREMENTS

COMPONENT	REQUIREMENT
NinjaTrader	v8.1.6.3 or higher (tested on v8.1.7.2)
Operating System	Windows 10 or 11 (64-bit)
Connection	Active internet connection for license validation
Account	NinjaTrader account (free or brokerage)
Markets	Futures (ES, NQ, CL, GC, MES, MNQ...) or Forex

INSTALLATION — 4 STEPS

1	Download the ZIP Your permanent download link is in your Lemon Squeezy purchase email. Download ProfitLock_v2.3.0.zip from that link.
2	Import into NinjaTrader In NinjaTrader: Tools → Import → NinjaScript Add-On . Select the ZIP file. NinjaTrader extracts and compiles the indicator automatically.
3	Restart NinjaTrader After import completes, close and restart NinjaTrader completely. This ensures the license validates correctly. Do not skip this step.
4	Add to Chart Right-click any chart → Indicators . Find Profit Lock and double-click. The panel appears in Chart Trader. Your license activates automatically — no codes needed.

HOW TO USE

Manual Lock	Click the PL button. Profit Lock places PL_SL (stop at Bid – N ticks) and PL_TP (target at Ask + 1 tick) as an OCO pair. 300ms later cancels your old ATM stop — zero exposure window.
Auto-Lock	Enable the Auto checkbox. When unrealized profit reaches your tick threshold, PL fires automatically via OnMarketData(). Under 1ms latency. Fires once per trade, resets automatically.
Offset (ticks)	Set how much profit to protect below market. Range: 1–200 ticks. Example: 15 ticks = stop placed 15 ticks in profit from entry.
Reset	When PL_SL or PL_TP are filled or cancelled, Profit Lock resets automatically and is ready for the next trade. No manual reset needed.

VISUAL FEEDBACK — PANEL BORDER COLORS

STATE	BORDER	PANEL LABEL	MEANING
No open position	Blue	Lock +X ticks	Ready — waiting for a position
Lock active	Green	Locked at +Xt Active	OCO orders placed — profit protected
Invalid stop	Orange	Warning	Stop condition not met — position safe, no action
Trade closed	Blue→reset	Lock +X ticks	Auto-reset complete — ready for next trade

TROUBLESHOOTING

ISSUE	SOLUTION
Indicator not in list after import	Restart NinjaTrader fully. If it persists: Tools → Edit NinjaScript → open Profit Lock → compile (F5).
License validation error on startup	Log into NinjaTrader with the same email used at purchase. Check internet connection. Restart NT. If error persists after 24h, contact support.
Auto-Lock not firing	Verify: (1) Auto checkbox enabled, (2) open position with stop order, (3) unrealized profit has reached the configured threshold.
Buttons greyed out	Profit Lock requires an active position. Buttons activate only when a valid position is detected.
Error after NT update	Re-import the ZIP: Tools → Import → NinjaScript Add-On. PL v2.3.0 is compatible with NT v8.1.7.2+.

LICENSE & SUPPORT

License type	Lifetime — all future updates included
Activation	Automatic when indicator loads — no codes needed
Support portal	breakeventrail.com/license-check
Email	support@breakeventrail.com
Response time	Within 24 hours on business days
Refund policy	7-Day Money-Back Guarantee — no questions asked
